

CommSys Announces the Release and Certification of ConnectCIC™ CLIPS™/IA.

Dayton, Ohio, May 3, 2005 -- CommSys is pleased to announce the availability of the newest product offering in our ConnectCIC™ family of products, ConnectCIC™ CLIPS™/IA. CommSys is proud to be the first vendor to meet all requirements set forth by Iowa's Department of Public Safety and achieve certification on the newly upgraded Iowa Message Switch. Our certification was sponsored by the City of Bettendorf Public Safety Department.

The CommSys ConnectCIC family of products enables public safety software vendors and agencies to have two-way access to one or more state, national, regional, and local CIC or CJIS system via a common interface tool or stand-alone client application while sharing a common server application. Our interface tool allows public safety software vendors to seamlessly integrate from state to state commonly-used CJIS functionality within their applications to help agencies reduce redundancy and increase operating efficiencies. The most commonly integrated CJIS functionality is the often-used inquiries and entry/modify transactions such as wanted and missing persons and stolen vehicles, boats, guns and articles. ConnectCIC CLIPS/IA. is a state-specific stand-alone client application providing access to all state-supported CJIS functionality as not all CJIS transactions make sense to integrate in a CAD, RMS, or mobile application.

CommSys understands that having affordable, reliable, convenient, and secure access to critical information such as CJIS records is vitally important for all law enforcement and criminal justice organizations. ConnectCIC CLIPS/IA. is specifically designed with this in mind. ConnectCIC CLIPS/IA. is also designed to assist agencies in affordably managing the ever-changing requirements brought about by heightened security issues, NCIC 2000 and state compliances, and necessary technology upgrades.

"Reducing the costs of CJIS access and increasing the productivity and efficiency of event responses, system administration, and history searches are critical factors for agencies," said Robert Turner, President, CommSys, Inc. "We believe ConnectCIC CLIPS/IA. will help agencies meet their overall needs while reducing operating expenses."

ConnectCIC CLIPS/IA., using an XML transport protocol, empowers agencies to comply with Iowa's standards and requirements for full terminal access via the IOWA Message Switch (inquiry, entry, modify, administrative messages, hit confirmations, etc.). ConnectCIC CLIPS/IA. also provides agency administrators

with easy-to-use tools and processes to fully configure devices, users, and access permissions based upon needs and individual certification levels.

“We are excited to implement ConnectCIC CLIPS/IA,” said Tom Holladay, IS Coordinator, City of Bettendorf. “This application is designed with both the user and administrator in mind making it extremely configurable and useable throughout our entire agency for not only initial transactions but for history searches, analysis, and reports. We believe with ConnectCIC CLIPS/IA. we will be able to significantly reduce our operating costs and achieve an ROI in less than three years. “

About CommSys

For more than 15 years, CommSys, Incorporated, headquartered in Dayton, Ohio, and privately held, has supplied high-quality technology solutions, including software products and services, to public safety software vendors and state, county, and municipal agencies.

In a world driven by rapidly-changing information technology, our people make all the difference. By teaming with CommSys, you benefit from the unmatched expertise of our IT professionals. We apply our incredible depth of experience and combine that with our broad technical knowledge of public safety IT systems and software to deliver the right products and solutions to optimize your workflow and solve strategic and tactical organizational challenges. We have built innovative and cost-effective solutions even in situations where no such option seemed possible. Our continual goal is to provide you with sound, reliable technology solutions to help your organization succeed.
